

### Floatrope

The braided floatrope from Hampidjan is an alternative to the conventional floats for use on headlines, wings and to create lift in codends. The rope is very flexible and it can easily be either wound on winches or laid down on deck or in box. The cover is of braided polyethylene, which is giving a thin but strong and durable

protection for the floats inside. Use of the float rope on seine nets has improved all handling of the net as it can be wound on winches with the netting. Damages on the netting, which are due to entangling with conventional floats, are minimal with the use of the float rope resulting in less repair time and lower netting cost.

Type	Diameter	Buoyancy	Working depth	Length
Multifloat	42 mm	0,38 kg/m	1000 m	90 m
	50 mm	0,46 kg/m	1000 m	90 m
	60 mm	0,75 kg/m	1000 m	90 m
	70 mm	1,07 kg/m	1000 m	90 m
	100 mm	2,03 kg/m	1000 m	60 m
	140 mm	3,20 kg/m	1000 m	60 m
Singlefloat	135 mm	4,33 kg/m	550 m	60 m

Other sizes and lengths are available on request.
